

24-08-19

Made agar plates (LB/amp100)

Ran yesterday's PCRs on an agarose gel – left to right: ladder, PCR 1, PCR2, PCR3, PCR4. 5 ul each PCR reaction + 2 ul loading dye. 100V.

PCR4 produced a band of the expected size (~600 bp). Need to repeat PCRs 1-3.

Streaked *E. coli* MG1655 on LB agar for tomorrow. Inc O/N 37C.
